axe Assistant

Scale accessibility knowledge with a trusted, generative AI chatbot

deque

Designers, developers, and testers at organizations around the world trust axe Assistant to deliver fast, expert-backed accessibility answers right in the tools they use every day. It's trained on the most comprehensive and exclusive accessibility data available— only from Deque (dee-cue).

Most companies don't have enough accessibility experts to support every team or individuals may be too embarrassed to ask simple accessibility questions. And when developers turn to general-purpose AI tools, they often receive wrong information— because most online content isn't accessible. That's why there's a better way—with axe Assistant.

> *"The tools and services Deque offers help us do our best work and provide our best to our customers and end-users."*
>
> *— Founder & CEO, Codecraft Works*

Axe Assistant is a generative AI chatbot purpose-built for digital accessibility. It instantly answers any accessibility question from policy guidance to code-level implementation—with responses trained on Deque University, one of the most trusted resources for accessibility knowledge and training. Available on the web, Slack, and Microsoft Teams, axe Assistant meets developers where they work, and gives them a chance to dive deeper into their accessibility needs and ask follow up questions. And with closed, enterprise-grade security, your data stays protected.

Getting started is easy. You can use axe Assistant with a Deque University license or as a separate Slack and Microsoft Teams instance. Then you can just ask your first question, and help your teams move faster without breaking their workflow.

With axe Assistant, accessibility help is just a message away.

Fast and convenient
Works efficiently across the systems you use most including the web, Slack, and Microsoft Teams

Accurate
Powered by Deque University, the industry's largest and most authoritative source of digital accessibility knowledge.

Secure
Runs on a closed, enterprise-grade AI system to ensure consistent answers and keep your data secure.

Scale your accessibility knowledge with a trusted AI chatbot

Accessibility resources are limited and experts are often pulled into questions that don't require their level of expertise. Axe Assistant delivers instant answers to common questions, reducing backlog and freeing up accessibility teams to focus where they're needed most.

Build accessible code, faster

Axe Assistant helps developers stay productive by generating accessible code as they work—early in the development lifecycle. Whether developers are creating a new component or fixing an old one, they can just ask for help. From building an accessible radio button group to reviewing alt text—axe Assistant gives immediate, practical support that keeps teams moving forward.
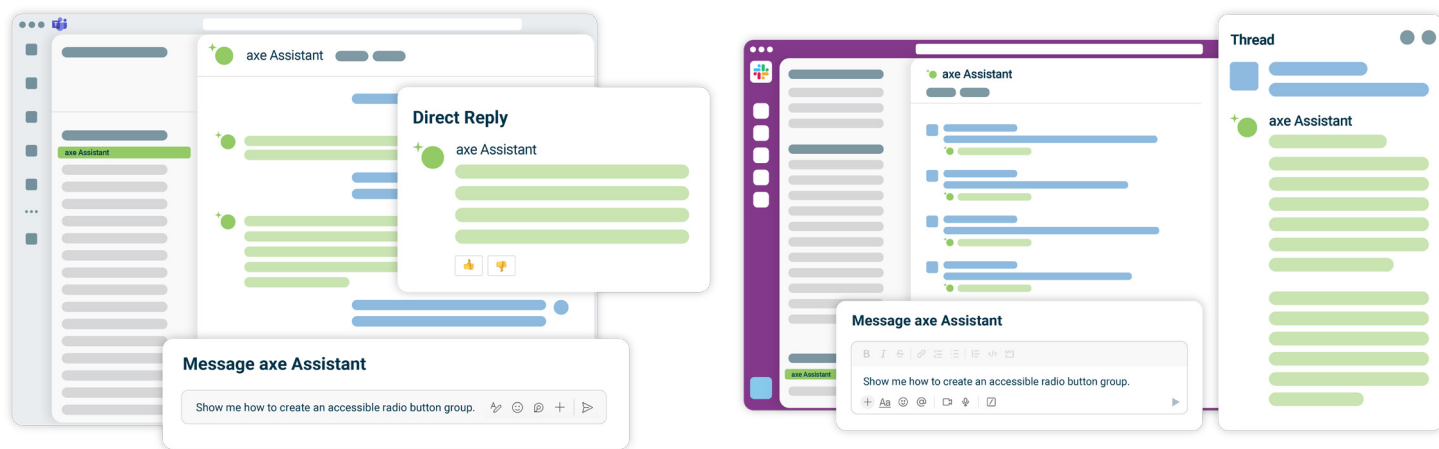

Upskill your dev team with trusted guidance

Axe Assistant is more than just a coding tool—it's a go-to resource for answering any accessibility question. Teams can ask about anything from navigating screen readers to making the business case for accessibility, and get accurate, expert-backed answers they can trust.

Stay aligned with accessibility standards

Whether you're unsure how to handle alt text or verifying if your headings meet WCAG, axe Assistant helps your team learn as they code. It's an educational companion that ensures your products meet compliance requirements and accessibility best practices—without slowing your team down.

Now available in Slack, Microsoft Teams, and on the web with Deque University.
