

## Become more accessible and prove you're compliant.

The world's top universities, enterprises, and banks trust axe Auditor to streamline their manual testing process so teams can deliver fully accessible products, faster.

Manual testing is the hardest, slowest, and most expensive part of software development. While up to 80% of accessibility issues can be found through developer tools like axe DevTools Extension, manual testing is essential to achieve more complete accessibility. But for many accessibility teams, it's still an overwhelming workload that drives up costs, leads to missed issues, and creates inconsistent results. Thankfully, there's a better way with Deque (dee-cue).

Axe Auditor makes manual accessibility testing easy, fast, and cost-effective. It gives clear, step-by-step instructions so accessibility novices on QA teams—not just experts—can consistently handle the final stages of testing. Enabling more testers with a standardized methodology speeds up the process, makes testing more predictable, and lightens the load for accessibility teams.

Start by importing the issues from axe DevTools Extension or use axe Auditor's test automation. From there, axe Auditor identifies issues that need manual testing—everything automation and guided testing can't cover. It guides users through the testing process, highlights high-impact problems, and ensures every piece of digital content is tested, fixed, and documented. Best of all, it acts as a trusted system of record for compliance, making it easy to share results with leadership, partners, and customers.

Achieve full accessibility, showcase your progress, and create inclusive experiences with axe Auditor.

*"The tools that Deque provided really enable us to do the work ourselves. I was surprised to see how useful the audit report was and how easy it was to use."*  
- Shannon Landin, CEO of Codecraft Works

### Easy

Enable accessibility novices to perform manual testing and fix issues with structured guidance, reducing the cost and effort of testing.

### Actionable

Get prioritized results, ready-to-use issue descriptions, and remediation libraries with clear instructions to help dev teams quickly address accessibility issues.

### Comprehensive

Maintain a complete system of record for compliance with detailed audit trails and issue tracking, giving your company the proof it needs to meet accessibility standards.

# Identify, fix, and prove accessibility

## Find issues early to lower costs

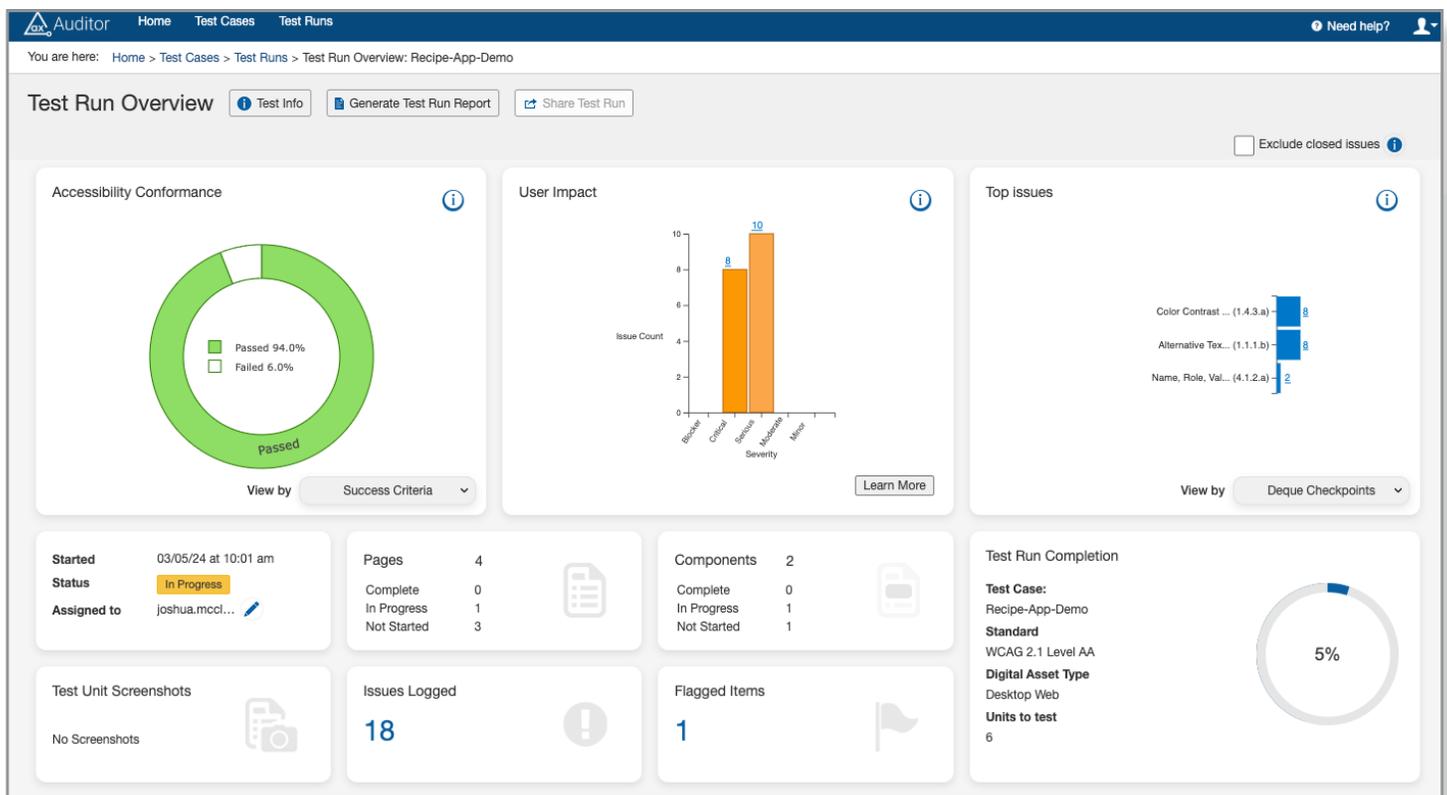

Empower accessibility novices to handle manual testing without being experts. Axe Auditor leverages axe DevTools Extension data, test automation, and the axe-core engine to provide consistent testing results for any digital asset (i.e. PDFs, kiosks, and websites). Ensure all criteria are tested before code is released—cutting costs and boosting efficiency.

## Save time and fix issues faster with a consistent test process

Establish a consistent test methodology and issue reporting process to reduce feedback loops and ensure predictable results. Save time with an issue description library that documents violations in seconds, streamlining work for accessibility testers. Prioritized results and remediation libraries provide clear instructions to help dev teams quickly address issues.

## Report on your compliance process and become accessible

Track progress, identify trends, and generate tailored reports to prove compliance to customers, partners, and regulators. Use in-product communications to save associated threads, creating a complete audit trail with axe Auditor as your system of record.
