

axe DevTools for Web

**Accessible development, your way.
Save time, money, and headaches.**

The world's largest banks, software companies, and healthcare institutions trust the axe DevTools for Web bundle to make their websites accessible.

Fixing accessibility issues after release is costly, risky, and frustrating. It leaves customers struggling with inaccessible products and developers buried in backlogs or forced to roll back code. Deque (dee-cue) offers a better way.

Axe DevTools for Web helps you find and fix accessibility issues early in development, saving time and reducing costs. It's built for developers—no prior accessibility experience needed. With tools like the browser extension, code linting, APIs, and end-to-end testing, digital accessibility becomes simple, fast, and an embedded part of your workflow.

Powered by axe-core, the industry's most trusted accessibility engine, and AI backed by the largest database in the industry, you get zero false positives and the widest test automation coverage available. Plus, it integrates seamlessly with your tools, coding languages, and CI/CD pipelines.

From feedback in the browser to testing pull requests, axe DevTools for Web handles accessibility testing so your team can focus on building great products everyone can use.

Accessibility isn't extra work—it's great development.

Zero
false positives

Accurate

Catch more than 80% issues with AI-driven tools that test pages, components, and user flows. Get reliable results with zero false positives and clear, easy-to-understand remediation steps.

Flexible

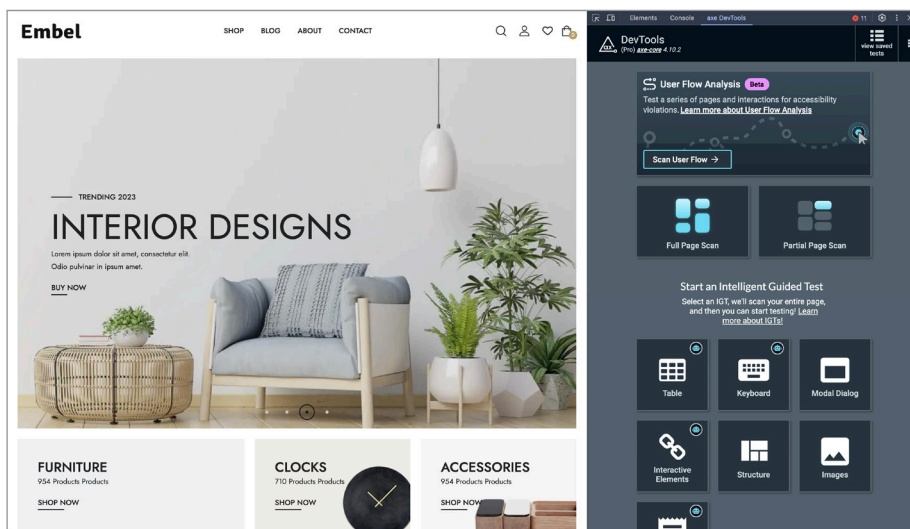

Integrate testing at any stage of your SDLC. With custom rules, flexible installation options, and compatibility with your team's tools, scaling accessibility across teams is simple and secure.

Actionable

Gain a full view of accessibility across projects with tools to save, share, and manage test results. Export issues directly to Jira or other formats to keep your team organized and aligned.

Everything you need to build accessible websites.

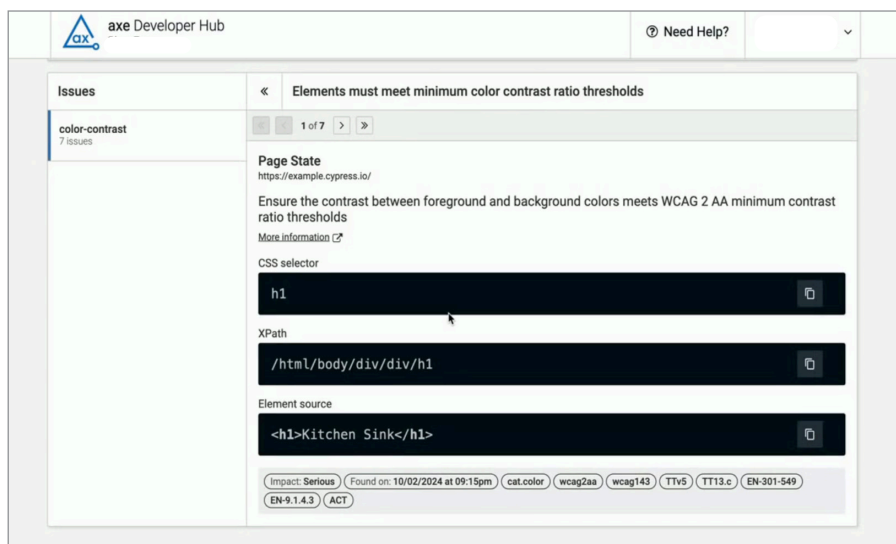

Uncover more issues, faster

Axe DevTools Extension lets you catch and fix more than 80% of accessibility issues before they reach production. Scan pages, components, or user flows in your browser with AI-powered automation for fast, accurate results and reports you can share with leaders. In-product guidance makes fixing issues quick and simple—no training required. Test where you build, get instant feedback, and keep your team moving.

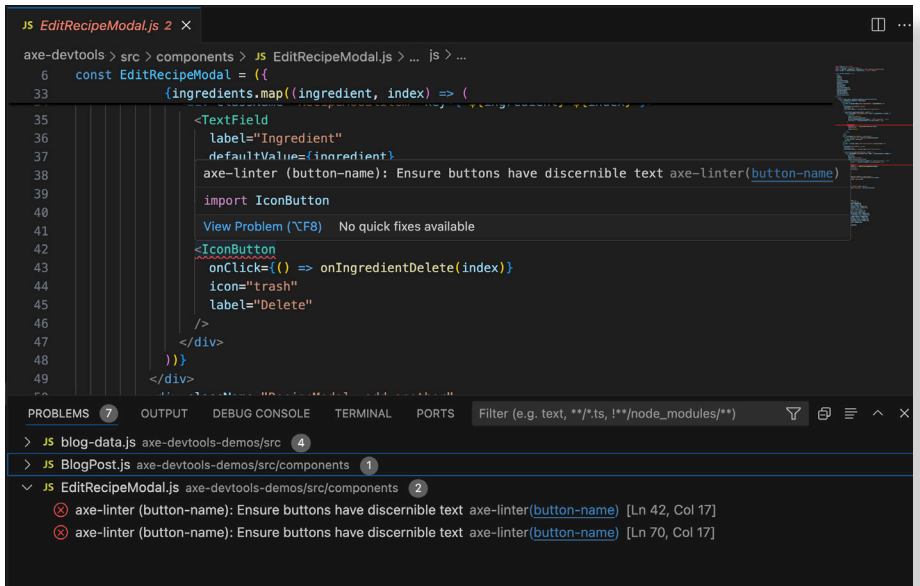

Turn commits into accessibility progress

Axe Developer Hub integrates accessibility testing into your end-to-end tests with one configuration change, letting developers easily catch and fix issues. Every code commit delivers clear reports that highlight trends, prioritize fixes, and show progress over time. Leaders can block releases with unresolved issues to ensure reliable results. Easy to set up, axe Developer Hub helps teams deliver accessible products without slowing down.

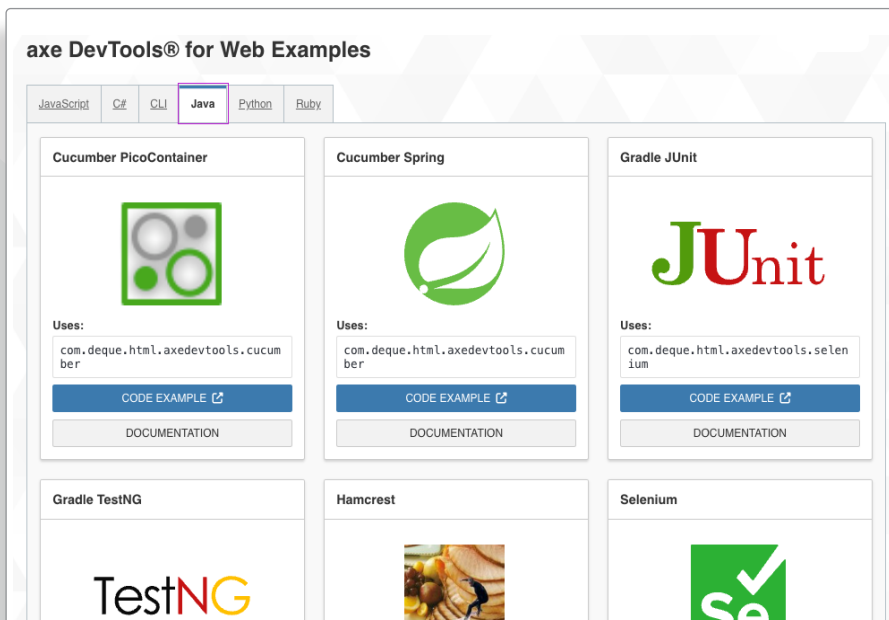

Fix issues as fast as you code

Axe DevTools Linter flags accessibility issues in real time, right in your IDE—like a spell checker for accessibility. Catch and block accessibility issues where you work in GitHub, Jenkins, SonarQube, and CI/CD pipelines. Prevent inaccessible code from reaching production, and get clear, actionable feedback without leaving your workflow. We can also handle custom components to create consistently accessible experiences for all users. Get clean, accessible code early.

Tailor testing to your workflow

Axe DevTools APIs integrate into your automated testing and CI workflows, supporting popular languages like Node.js, JavaScript, C#, Java, Python, and Ruby. Flexible and customizable, they adapt to your unique pipeline to test every build and site with precision. Best of all, they're backed by Deque's expert support, so you get reliable, actionable guidance at every step of your journey.

Accessibility app testing made simple

The axe DevTools for Web bundle fits easily into any dev team workflow or environment—as well as securely on-premise or in a private cloud—to catch and fix issues before they reach production.

 While you type	Find and fix issues as you code in your IDE.	axe DevTools Linter
 In your browser	Run tests in your browser—perfect for live pages or release candidates.	Axe DevTools Extension
 In your pipeline	Automatically test alongside other functional tests in your CI/CD pipeline.	Axe Developer Hub Axe DevTools Linter APIs
