

# axe Developer Hub

Effortless adoption. Build accessible code, faster.

The world's top banks, retailers, and tech companies trust axe Developer Hub for end-to-end accessibility testing.

Some developers hesitate to adopt accessibility testing because traditional methods are complicated, time-consuming, and disconnected from their workflows. Deque (dee-cue) offers a better way.

Axe Developer Hub seamlessly adds accessibility to your existing testing processes. Developers can catch and fix issues as they code and with every commit, delivering higher-quality products while saving time and reducing costs. Actionable reports highlight trends, identify new issues, and prioritize fixes—without duplicates.

Getting started is simple. With just one configuration change, axe Developer Hub works alongside your functional tests. Every commit contributes to measurable progress, with

accessibility scores showing where you stand. Plus, leaders can set accessibility policies to block releases with unresolved issues, and track improvements over time.

Deliver accessible, high-quality products with ease. With axe Developer Hub, adopting accessibility testing is effortless.

- ✓ **Instant installation**
- ✓ **Zero maintenance**
- ✓ **Full axe-core coverage**

## Reliable

Consistently prevent bugs from reaching production, track improvements over time and block code with unresolved issues.

## Easy

Set up in minutes and make accessibility testing effortless for developers to adopt and maintain.

## Effective

Get clear and deduplicated results, identify new issues, and prioritize actionable tasks to improve accessibility.

# Maximize productivity with end-to-end accessibility

Axe Developer Hub is available as a part of the axe DevTools for Web bundle.

## Save time by keeping new code clean

Axe Developer Hub detects state changes instantly, finds new accessibility issues, and eliminates duplicates. It helps developers focus on keeping new code accessible, so they don't add to the backlog of legacy issues. And you can set team-wide rules to block pull requests when there's an issue, ensuring no bugs reach production.

## Get feedback and show progress

Whether you're testing locally or in CI/CD pipelines, axe Developer Hub provides clear, actionable feedback. Powered by axe-core's trusted rules, it delivers detailed guidance to resolve issues quickly. Track progress over time to see how your product becomes more accessible for your customers.

## Deliver amazing and accessible products, faster

With one quick configuration change, axe Developer Hub integrates into your end-to-end testing suite. No extra steps or maintenance needed— accessibility testing scales automatically, making it easy for developers to adopt and keep accessibility as part of your workflow, whether you're operating in a SaaS environment or on-prem.

## Stay in control

Get live support, training, and expert guidance to keep your team moving. Access detailed reports for insights, save your progress, share results, and organize all your test reports. With up-to-date documentation, enterprise security, configurable settings and versioning, you'll always be ready for what's next.

Integrate with Cypress, Playwright, Puppeteer, Selenium, and WebdriverIO.

**Figure 1.** Axe Developer Hub supports Selenium-based Java testing alongside the most popular JavaScript and TypeScript frameworks: Cypress, Playwright, Puppeteer, and WebdriverIO.
